## Cisco ap 1142 datasheet

The marketing description is not available. US\$33.00 52% DISCOUNT Buy Bulk Quote & Now Project Inquiry Data Sheet Cisco Aironet Access Point Series Performance with Investment Protection • Six times faster than 802.11a/g networks • Backwards compatible with 802.11a / b/g clients • M-Drive technology optimizes easy of installation and energy efficiency • 802.11n performance with existing PoE switches • Stylish design blends into a variety of Internal environments Secure Interoperability • Compatible with 802.11n • Intel Connect with Centrino Certified Simplified Network Management • Controller-based or standalone deployment options Secure Connections • Supports unauthorized access point detection and denial of service attacks • Management frame protection detects malicious users and alerts network administrators Increased network capacity • Dynamic frequency selection 2 (DFS-2) easy to install , Multi-purpose mounting bracket • Designed for easy replacement of existing access points • UL 2043 plenum evaluated for installation options above the ceiling or suspended from drop ceilings • Locks for theft protection Taking Business Mobility Mainstream Cisco® Aironet® series 1140 Access Point is a company-ready access point, designed for simple implementation and energy efficiency. The high-performance platform, which offers at least six times the throughput of existing 802.11a/g networks, prepares the company for the next wave of mobile devices and applications. Based on the Cisco Aironet heritage of RF excellence, the 1140 series combines the industry's most widely implemented 802.11n technology with an elegant industrial design that blends seamlessly with any business environment. Designed for sustainability, the 1140 series delivers high performance from the standard power of 802.3af over Ethernet, while reducing waste with multi-unit eco-packs and Energy Star certified power supplies. RF Excellence Building on the Cisco Aironet legacy of RF excellence, the 1140 series delivers industry-leading performance for secure and reliable connections. Enterprise-class silicon and optimized radios provide a robust experience using Cisco M-Drive technology, which includes: • Improves reliability and coverage for legacy clients • Improves 5GHz client connections in mixed client environments • Uses multicast to improve multimedia applications All these features ensure the best possible end-user experience on the wireless network. The Cisco Aironet 1140 series is a component of the Cisco unified wireless network, which can scale up to 18,000 units with full Layer 3 mobility to central or remote locations on the corporate campus, branch offices, and remote sites. Cisco Unified Wireless Network is the most flexible architecture, and scalable industry, which provides secure access to mobility services and applications and offers the lowest total cost of ownership and investment protection by seamlessly integrating with the existing wired network. Product specification lists Table 1 1 product specifications for Cisco Aironet 1140 series access points. © 2010 Cisco and/or its affiliates. All rights reserved. General Power Over Ethernet (PoE) Camera Power Device Modem Networking IEEE 802.11a, IEEE 802.11b, IEEE 802.11g, IEEE 802.11n Cisco M-Drive Technology, ClientLink Technology, MIMO Technology, Multimedia Wi-Fi Support (WMM), Power Over Ethernet (PoE) IEEE 802.11a, IEEE 802.11b, IEEE 802.11d, IEEE 802.11g, IEEE 802.11h, IEEE 802.11i, IEEE 802.11n, IEEE 802.1x, IEEE 802.3af AES, TLS, PEAP, TTLS, TKIP, WPA, WPA2 Power Over Ethernet (PoE) Processor / Memory / Storage Antenna Miscellaneous AES, PEAP, TKIP, TLS, TTLS, WPA, WPA2 Interface Provided RAM Environmental Parameters Min Operating Temperature Max Operating Temperature 10 - 90% (non-condensing) Header Dimensions & Weight Service & Support Limited lifetime warranty Service & Support Details Cisco Aironet 1140 Series Access Point Taking Business Mobility Mainstream The Cisco 802.11n access point designed for simple implementation and energy efficiency. The high-performance platform, which offers at least six times the throughput of existing 802.11a/g networks, prepares the company for the next wave of mobile devices and applications. Based on the Cisco Aironet heritage of RF excellence, the 1140 series combines the industry's most widely implemented 802.11n technology with an elegant industrial design that blends seamlessly with any business environment. Designed for sustainability, the 1140 series delivers high performance from the standard power of 802.3af over Ethernet, while reducing waste with multi-unit eco-packs and Energy Star certified power supplies. As part of Cisco unified wireless network, the 1140 series offers the lowest total cost of ownership and investment protection in the industry by seamlessly integrating with the existing network. RF Excellence Cisco unified wireless network with M-Drive technology removes the mystery associated with the design, implementation, and continuous optimization of enterprise wireless networks. With Cisco M-Drive technology, IT has the tools it needs to build and manage a high-performance wireless network without the need for extensive RF engineering expertise. Cisco M-Drive technology is a system-wide approach that manages the enterprise RF spectrum, improves wireless coverage, and increases system capacity and performance. Features include: Radio Resource Management (RRM): Automated self-healing optimizes RF's unpredictability to reduce • dead spots and help ensure high availability clients. RRM optimizes network capacity and minimizes interference by continuously monitoring and adjusting the power and channel settings of access points and then balance clients to improve wireless coverage. © 2010 Cisco Systems, Inc.
